

Arla Plast invests in new Breyer line to strenghten its capability for opaque products

Arla Plast has invested in the latest high technology state of art extruder for opaque products. The machine is being installed in Borensberg Sweden.

The new extruder will be able to produce the following products although its capability is not limited to these products.

- Products: ABS, ABS Matt, ABS/PMMA, PC/ABS
- Max width: 2200 mm
- Length: 500-3500mm
- Thickness range: 2-8mm (as standard)
- Surfaces: Smooth 00, texture 40

In the last 5 years Arla Plast has also invested in more extruders for our transparent products.

“We are happy to receive this machine and our staff are looking forward to work with the new technology; the machine will add efficiency in production and improve quality of the products”

Christian Krichau
Operations Manager

“Our investments in new technologies will continue to improve quality, speed, service and flexibility, which are our core values at Arla Plast”

Ayub Adam
Commercial Director.
