

WE INTRODUCE OUR ATECH® RANGE WITH A NEW DRESS - GRAIN 25

We are pleased to announce a new grain into the ATECH® product range that will be available from March 2021 in our product portfolio. But let's start at the beginning.

WHAT IS ATECH®?

At Arla Plast, ATECH® is our range for **ABS based products**. ABS is a raw material with high impact strength and impressive thermal qualities. It is the ideal product for thermoforming and fabricating, which is why this material is one of the most popular amongst thermoformers.

Recycling is an important part of the ABS business. And we can offer all possibilities in this field. Our total recycling concept will help you minimize the material cost and the environmental impact.

ABS sheets are used in a wide variety of **applications**, like machine covers, automotive parts, ski boxes, tough industrial applications, advertising, building and construction and more.

The **new grain 25** is suitable for interior applications or applications, where a more technical design is desired.

For more information and samples contact your local sales representative.
